

Israel, the gold standard in vaccinations.

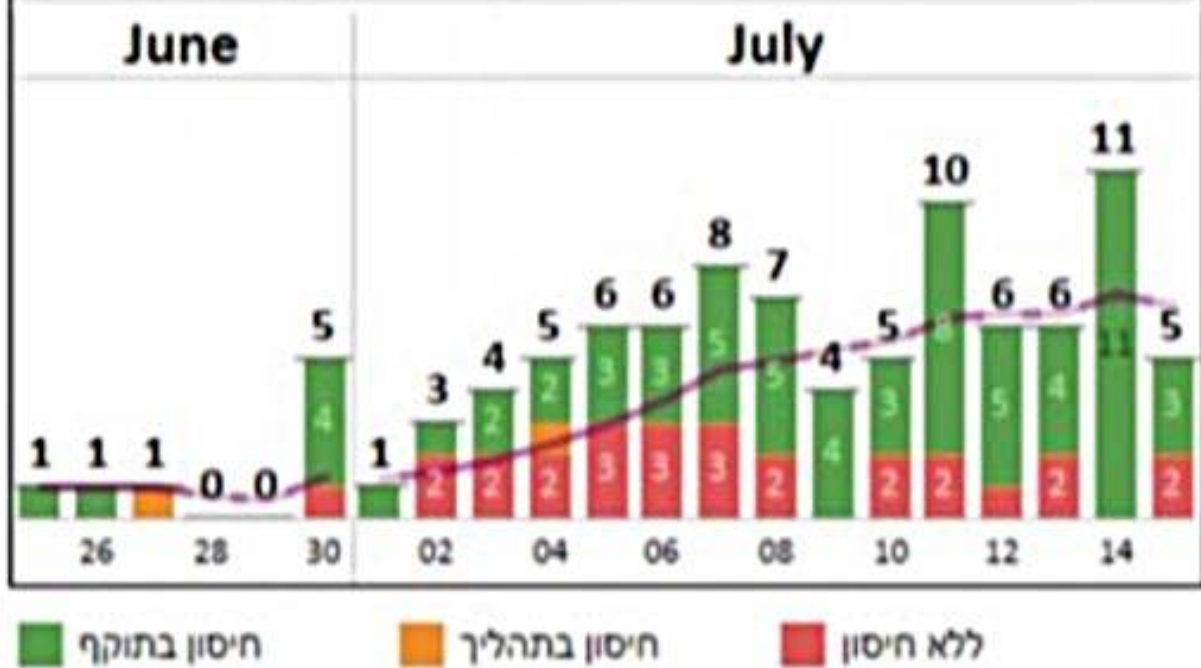

In Israel, where vaccine uptake has been very high due to restrictions on freedom for those who don't comply, data shows those who have received the COVID jab are 6.72 times more likely to get infected than people who have recovered from natural infection.

That too refers to test results, so let's look at hospitalization rates instead. Here, we find a majority of serious cases and deaths are in fact occurring among those injected with two doses.

The following is a screenshot of graphs. The red is unvaccinated, yellow refers to partially "vaccinated" and green fully "vaccinated" with two doses. The charts speak for themselves.

New severe COVID-19 patients מגמת קשים חדשים

Deaths trend מגמת נפטרים
